

Laser Marker Overview

Dual-Head

The innovative, patented Telesis dual-head laser system is **perfectly suited for advanced applications that require rapid processing**. The multi-head design of this laser offers the **unique ability to control two laser markers with the same controller**, reducing overall footprint and lowering the cost of operation. It is the industry's **only fiber laser system of its kind to be entirely air cooled and powered from a single-phase power outlet**.

Fiber

The Telesis APEX.200™ and Summit.Pro™ laser marking systems are the **most versatile marking technology** due to its **adaptability, minimal maintenance, and the total elimination of consumables** from the marking process. They are most used in metal and plastic processing industries for **precise and efficient direct marking** of parts and products. From automotive manufacturing through medical and security technology to electronics, Telesis Fiber delivers.

Plastics

Metals

Carbon Migration

Deep Marking

Ultraviolet

The 355 nm UV laser wavelength is versatile in marking a wide range of materials and **perfect for "cold marking" applications where heat-affected zones are not allowed**—the machine is **great for marking plastics and silicon materials without additives and can mark glass with a reduced risk of micro-fracture**. The very small high-quality beam spot makes **precision micro-marking with extremely sharp resolution** possible.

Metals

Low Pigmentation

Organics

Green

The Telesis EV4GDS is a fiber-coupled, diode-pumped, solid-state (DPSS) green wavelength system. The laser beam characteristics are **optimized for applications that require high beam quality and stability**. The EV4GDS offers **extra power and speed**—the ideal choice for laser marking, scribing, and trimming. The robust mechanical and optical design of the Telesis EV4GDS **enables operation in an industrial environment where shock, vibration, and dust are a concern**.
