

## Vanadate

E-Series diode-pumped YAG and vanadate laser markers offer **improved beam quality, increased depth of focus, and higher peak powers** compared to fiber lasers—for fine marking, heat-sensitive materials (metal, foils, silicon, plastics, etc.) and **applications where high consistency is required.**

## CO<sub>2</sub>

Proven CO<sub>2</sub> systems provide a galvo-steered beam. It is an **excellent choice for heavy use and high-duty cycle environments** and is beneficial to **label and packing operations** as it removes the need for consumables and speeds process. **Equally capable at stationary bench-top use and mark-on-the-fly installations**, this machine can mark up to 1300 characters per second in automated environments.

# Technology Options

## Vari-Z™ 3-Axis 3D Marking

Vari-Z™ 3-Axis Laser Markers are perfectly suited for advanced applications that require processing of non-flat parts, multiple planes, and uneven surfaces. The Telesis Vari-Z™ technology increases the focal range, eliminating the need for tooling changes while saving time and money.

## AutoFocus

Additionally, the AutoFocus function option on available Vari-Z™ model lasers compensates for varying target heights. This displacement sensor allows the machine to continuously compensate for changes in material thickness.
